

Addition

By the end of the Foundation Stage children are expected to confidently, consistently and independently do the following before moving on to the schools formal calculation policy:

- Count reliably with numbers from 1 to 20.
- Place them in order.
- Say one more than a given number.
- Add two single digit numbers.

Count forwards from any given number up to 20 (e.g. count on 3 more than 6).

Stage	Working	Vocabulary
Begin to recognise addition by combining groups of objects together.		Counting each group. Combining and counting all together starting at one.
Count along a number line to add numbers together. Use + and = notations to record calculations).		Value of each number. 2 units + 5 units = 7 units etc.
Addition by counting on. Recognising that the answer will be greater. Recognising that addition can be done in any order.		Value of each number. 2 units + 5 units = 7 units etc.
Partitioning numbers in preparation for adding.		Recognising that numbers can be represented in different ways. $53 = 50 + 3$. 5 10s and 3 units.

<p>Know which digit changes when adding 1s or 10s.</p>	$\begin{array}{r} 1 \ \underline{5} + 1 = 1 \ \underline{6} \end{array}$  $\begin{array}{r} \underline{1} \ 5 + 1 \ 0 = \underline{2} \ 5 \end{array}$ 	<p>Recognising the value of each digit. $15 = 10 + 5$. $15 + 1 \text{ unit} = 16$. $16 = 10$ and 6 units.</p> <p>15 plus 10. The number in the tens column will change. $15 + 10 = 25$. The number in the 10s column increases.</p>
<p>Adding two digit numbers by partitioning. Adding tens first and then units. Biggest number first and counting on.</p>	$1 \ 5 + 1 \ 3 = 2 \ 8$ 	<p>15 goes first. 13 is the same as $10 + 3$. Add 10 first. $15 + 10 = 25$. 3 units left to add. $25 + 3 = 38$.</p>
<p>Adding two digit numbers using a number line. Children can partition numbers recognising that 36 can be represented in a number of different ways (e.g. $2 = 34$ or $30+2+4$), added differently but the result will be the same.</p>	$4 \ 8 + 3 \ 6 = 8 \ 4$  	<p>Add 2 first to jump to next 10 (50). Recognise that there are 34 left to add ($34 + 2 = 36$). There is 34 left to add. Next jump of 34 to 78.</p> <p>Or,</p> <p>Add tens first. 36 has 3 tens or 30. 48 add 30 become 78. Next jump of 2 to reach next 10 (80). 4 left to add, next jump to 84.</p>
<p>Expanded method using columns. Recognise place value of digits, adding units first and then tens. Adding by partitioning allows children to recognise the place value of each digit. Children recognise that $8 + 6 = 14$ and must be written in two columns.</p>	$\begin{array}{r} 4 \ 8 + 3 \ 6 = 8 \ 4 \\ 4 \ 8 \\ + 3 \ 6 \\ \hline 1 \ 4 \\ 7 \ 0 \\ \hline 8 \ 4 \end{array}$	<p>Units added first. $8 + 6 = 14$. 14 is greater than 10. 1 in tens columns, 4 in units. Second step is $40+30$. Language recognised that '4' is worth '40' and 3 is worth '30'.</p>

<p>Formal method for adding in columns. Adding numbers up to three digits with no exchange into the next column. Add units, tens and then hundreds.</p>	<table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr><td></td><td></td><td>1</td><td>2</td><td>1</td></tr> <tr><td></td><td>+</td><td>3</td><td>2</td><td>1</td></tr> <tr><td></td><td></td><td>4</td><td>4</td><td>2</td></tr> </tbody> </table>			1	2	1		+	3	2	1			4	4	2	<p>Units, tens hundreds. 1 unit + 1 unit = 2 units, 2 tens + 2 tens = 4 tens etc.</p>																	
		1	2	1																														
	+	3	2	1																														
		4	4	2																														
<p>Adding numbers with up to four digits where there is at least one exchange between columns.</p>	<table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr><td></td><td></td><td>4</td><td>6</td><td>2</td><td>4</td></tr> <tr><td></td><td>+</td><td>1</td><td>3</td><td>6</td><td>8</td></tr> <tr><td></td><td></td><td>5</td><td>9</td><td>9</td><td>2</td></tr> <tr><td></td><td></td><td></td><td></td><td>1</td><td></td></tr> </tbody> </table>			4	6	2	4		+	1	3	6	8			5	9	9	2					1		<p>Same method as in previous stage, children recognise that 4 units + 8 units = 12 units. 12 units contains 1 ten, so the one must be written in tens column under the 'equals sign'. Then: 2 tens + 6 tens + 1 ten (below equals sign – 1 ten below equals sign is then crossed out to show it has been added.</p>

Subtraction

By the end of the Foundation Stage children are expected to confidently, consistently and independently do the following before moving on to the schools formal calculation policy:

- Say which number is one less than a given number.
- Subtract two single digit numbers.

To count back to find and answer (e.g. Count back 3 from 6).

Stage	Method	Vocabulary
Relate subtraction to taking away using physical objects. Physically manipulating objects to take away.		Three circles (objects) subtract 2 circles (objects) leaves one circle (object).
Subtracting by finding one less than a number for numbers up to three.		1 less than 7 is 6. 2 less than 7 is (counting back) 6, 5. 3 less than 7 is (counting back) 6, 5, 4.
Counting backwards along a number line for numbers that are further apart. Supported by using physical objects to support subtraction. Record calculations using – and = signs.	 $7 - 4 = 3$ 	'If I take away (subtract) four there are 3 left.' 'Start at the biggest number... 7, 6, 5, 4, 3...'
Subtracting a 1 from a two digit number using a number line or hundred square.		Counting backwards in 1s.

	$45 - 1 = 44$ 																																																																																																					
<p>Partitioning numbers in preparation for subtracting.</p>		<p>Recognising that numbers can be represented in different ways. $53 = 50 + 3$. 5 10s and 3 units.</p>																																																																																																				
<p>Subtracting multiples of 10 from two digit numbers using a number line or hundred square.</p>	<table border="1" data-bbox="451 495 871 846"> <tr><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td></tr> <tr><td>11</td><td>12</td><td>13</td><td>14</td><td>15</td><td>16</td><td>17</td><td>18</td><td>19</td><td>20</td></tr> <tr><td>21</td><td>22</td><td>23</td><td>24</td><td>25</td><td>26</td><td>27</td><td>28</td><td>29</td><td>30</td></tr> <tr><td>31</td><td>32</td><td>33</td><td>34</td><td>35</td><td>36</td><td>37</td><td>38</td><td>39</td><td>40</td></tr> <tr><td>41</td><td>42</td><td>43</td><td>44</td><td>45</td><td>46</td><td>47</td><td>48</td><td>49</td><td>50</td></tr> <tr><td>51</td><td>52</td><td>53</td><td>54</td><td>55</td><td>56</td><td>57</td><td>58</td><td>59</td><td>60</td></tr> <tr><td>61</td><td>62</td><td>63</td><td>64</td><td>65</td><td>66</td><td>67</td><td>68</td><td>69</td><td>70</td></tr> <tr><td>71</td><td>72</td><td>73</td><td>74</td><td>75</td><td>76</td><td>77</td><td>78</td><td>79</td><td>80</td></tr> <tr><td>81</td><td>82</td><td>83</td><td>84</td><td>85</td><td>86</td><td>87</td><td>88</td><td>89</td><td>90</td></tr> <tr><td>91</td><td>92</td><td>93</td><td>94</td><td>95</td><td>96</td><td>97</td><td>98</td><td>99</td><td>100</td></tr> </table> 	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63	64	65	66	67	68	69	70	71	72	73	74	75	76	77	78	79	80	81	82	83	84	85	86	87	88	89	90	91	92	93	94	95	96	97	98	99	100	<p>'Subtracting tens. The number in the tens column will change. 1 ten less than 45. There are 4 tens in 45 so one ten less will be 35 etc.'</p>
1	2	3	4	5	6	7	8	9	10

91	92	93	94	95	96	97	98	99	100																																																																																													
<p>Partitioning a number to be subtracted using a number line where the numbers in the units column isn't 'impossible'.</p>	$45 - 23$  	<p>'23 is 2 tens and 3 units. Count back two tens first. The number in the tens column will be less. Start at 45...35...25... Now units. 24...23...22.'</p> <p>The first step can be done as subtracting 20 in one go as approximate.</p>																																																																																																				
<p>Formal method for subtracting in columns. Subtracting two digits from two digits with no exchange.</p>	<table border="1" data-bbox="834 1346 1066 1541"> <tr><td></td><td>8</td><td>6</td></tr> <tr><td>-</td><td>2</td><td>4</td></tr> <tr><td></td><td>6</td><td>2</td></tr> </table>		8	6	-	2	4		6	2	<p>Children recognise place value of each digit. 6 units – 4 units = 2 units. 8 tens – 2 tens = 6 tens.</p>																																																																																											
	8	6																																																																																																				
-	2	4																																																																																																				
	6	2																																																																																																				
<p>Partitioning a number to be subtracted using a number line where the numbers in the units column is 'impossible'.</p>	$45 - 27$  	<p>As when using a number line two steps previously. When subtracting units, children recognise that 25 subtract 7 can't be done in one go, so represent this as two subtractions of 5 and 2.</p>																																																																																																				
<p>Subtracting up to 3 digits with one exchange.</p>	<table border="1" data-bbox="778 1906 1066 2101"> <tr><td></td><td>3</td><td>5</td><td>11</td></tr> <tr><td></td><td>1</td><td>2</td><td>3</td></tr> <tr><td>-</td><td>2</td><td>3</td><td>8</td></tr> </table>		3	5	11		1	2	3	-	2	3	8	<p>Recognise place value of each digit. '1 unit – 3 units is impossible. How can we make it possible? Exchange one ten.' Children exchange 1 ten from tens</p>																																																																																								
	3	5	11																																																																																																			
	1	2	3																																																																																																			
-	2	3	8																																																																																																			

		column, cross out 6 and so it becomes 5 tens. 1 ten then goes to units to make 11 units. 11 units – 3 units = 8 units. 5 tens – 2 tens = 3 tens etc.
Subtracting numbers up to four digits with more than one exchange.	$\begin{array}{r} \cancel{5}6 \cancel{15}6 \cancel{1}6 8 \\ - 1 7 8 3 \\ \hline 4 8 8 5 \end{array}$	Method and vocabulary as above.
Subtracting numbers with different amounts of digits up.	$\begin{array}{r} 4 \cancel{5}6 12 \cancel{5}6 14 \\ - 2 4 2 5 \\ \hline 4 3 8 3 9 \end{array}$	As above. Children recognise place value of each digit and line numbers up right to left.
Subtracting decimals with the same number of decimal places.	$\begin{array}{r} 4 \cancel{3}4 12 6 \\ - 1 6 3 \\ \hline 4 2 6 3 \end{array}$	Line numbers up using the decimal point. Recognise the value of each digit. 6 hundredths subtract 3 hundredths = 3 hundredths. 2 tenths subtract 6 tenths is impossible. To make it possible we need to exchange one unit from the next column.
Subtracting numbers with different amounts of decimal places.	$\begin{array}{r} \cancel{2}3 15 \cancel{6}7 12 4 \\ - 6 4 3 \\ \hline 2 9 2 8 4 \end{array}$	As above. Children recognise the place value of each digit before subtracting. 0s can be added to the missing empty squares of the number being subtracted to support the calculation if desired.

Multiplication

By the end of the Foundation Stage children are expected to confidently, consistently and independently do the following before moving on to the schools formal calculation policy:
Solve problems that include doubling numbers up to 20.

Stage	Method	Vocabulary
Counting in repeated groups. Manipulating and grouping physical objects and counting them.		Counting in 2s, 10s, begin to count in 5s.
Forming groups and arrays.		Groups – organising physical objects into groups and counting them.. 3..6...9... etc. Arrays – An arrangement of objects, numbers, counters etc into columns. Always arrange your arrays vertically.
Developing arrays to show visual representations of multiplications.		Counting in 3s using arrays. Arrange your counters vertically into groups of 3 and count. Make 3, 4 times. Count '3..6...9...12' etc. Make 2, 3 times. Count '2...4...6...' etc. Always arrange arrays vertically.
One digit number multiplied by a one digit number in a number sentence.		Same language as before. $3 \times 3 = 9$ 'An array/group of 3, 3 times. Count ... 3...6...9... etc.'

		$2 \times 4 = 8$ 'An array/group of 2, 4 times. Count...2...4...6...8 etc.'																																													
Introducing partitioning to multiply two digits by one digit.	<div style="text-align: center;"> $10 \qquad 2$ </div>  <div style="text-align: right; margin-right: 50px;"> <table border="1" style="border-collapse: collapse;"> <tr><td></td><td>2</td><td>0</td></tr> <tr><td>+</td><td></td><td>4</td></tr> <tr><td></td><td>2</td><td>4</td></tr> </table> </div> <div style="margin-top: 20px;"> <table style="border-collapse: collapse;"> <tr><td>x</td><td>10</td><td>2</td></tr> <tr><td>2</td><td style="border: 1px solid black; padding: 2px;">20</td><td style="border: 1px solid black; padding: 2px;">4</td></tr> </table> <div style="text-align: right; margin-right: 50px;"> <table border="1" style="border-collapse: collapse;"> <tr><td></td><td>2</td><td>0</td></tr> <tr><td>+</td><td></td><td>4</td></tr> <tr><td></td><td>2</td><td>4</td></tr> </table> </div> </div>		2	0	+		4		2	4	x	10	2	2	20	4		2	0	+		4		2	4	$12 \times 2 = 24$ Written method modelled alongside the array. 12 partitioned into $10 = 2$. Count answer. Answer added at the end. Numerical array modelled alongside the array.

Division

By the end of the Foundation Stage children are expected to confidently, consistently and independently do the following before moving on to the schools formal calculation policy:
Solve problems by halving and sharing numbers up to 20.

Stage	Method	Vocabulary
<p>Practical sharing. Children begin to understand how to share objects into equal groups. Counting in 2s, 5s and 10s.</p>		<p>Sharing objects into different groups.</p> <p>6 objects shared between two people. How many do they get each?</p> <p>Children share objects into groups one at a time.</p>
<p>Practical grouping. Groups of objects arranged into arrays.</p>		<p>How many groups of 3 can we make? There are 6 sweets, how many can two people have each?</p> <p>Arrays always arranged vertically.</p>
<p>Introduction of division sign showing array and corresponding number sentence.</p>		<p>$6 \div 2 = 3$</p> <p>Amount to be divided (divisor) under the division sign (6) arranged in arrays, number divided by (3) to the left, answer (number of arrays) above (2). This is the point where children may become</p>

		<p>confused by sharing; making groups of, making arrays, dividing. This should be reinforced with lots of practical hands on activities where the children can hear a range of mathematical vocabulary.</p>																																
<p>Develop division by arrays to include larger numbers (52, 10s etc)</p>	<div style="text-align: center;"> $\begin{array}{r} \div \quad 3 \\ \hline 5 \\ \hline \end{array}$  </div>	<p>$15 \div 5 = 3$.</p> <p>Language used as in previous stage.</p>																																
<p>Introduction to short method for division.</p>	<div style="display: flex; flex-direction: column; align-items: center;"> <table border="1" style="margin-bottom: 20px;"> <tr><td>÷</td><td></td><td></td><td></td></tr> <tr><td>5</td><td>1</td><td>3</td><td>5</td></tr> </table> <table border="1" style="margin-bottom: 20px;"> <tr><td>÷</td><td></td><td></td><td></td></tr> <tr><td></td><td>0</td><td>10</td><td></td></tr> <tr><td>5</td><td>1</td><td>3</td><td>³5</td></tr> </table> <table border="1"> <tr><td>÷</td><td>0</td><td>2</td><td>7</td></tr> <tr><td></td><td>0</td><td>10</td><td></td></tr> <tr><td>5</td><td>1</td><td>3</td><td>³5</td></tr> </table> </div>	÷				5	1	3	5	÷					0	10		5	1	3	³ 5	÷	0	2	7		0	10		5	1	3	³ 5	<p>Step one. Division out to resemble division in arrays.</p> <p>Step 2. We ask 'do we like these numbers in the 5 times table?' 1 hundred (in hundreds column is smaller than number were dividing by so it is carried into tens column to make 13 tens) We don't like 13 tens in 5 times table so it is crossed out and replaced by closest number to 13 in 5 times table -10-. 3 tens remaining is carried to units column making 35 units. We like 35 in 5 times table so that doesn't need to be modified. We're ready to solve.</p> <p>Step 3 – solving. 'How many times 5 gives us 0 hundred = 0.' Answer written above. 'How many times 5</p>

			↑				

			0	0			
5	7		1	4	5	3	5
			↑	↑			

			0	0	2		
5	7		1	4	5	3	5
			1	1	4		

			0	0	2		
5	7		1	4	5	3	5
			-	1	1	4	
				0	3	1	

			0	0	2		
5	7		1	4	5	3	5
			-	1	1	4	↓
				0	3	1	3

			0	0	2	5	
5	7		1	4	5	3	5
			-	1	1	4	↓
				0	3	1	3
				2	8	5	

Look at the first number – we don't like 1 in 57 times table because it is smaller than 57. So 0 goes above 1 because 57 goes into 1, zero times.

Look at second two numbers together – we don't like 14 in 57 times table because it is smaller than 57. So 0 goes above 4 because 57 goes into 14, zero times.

Look at next three numbers together. We don't like 145 but it is bigger than 57 so we like a number that is smaller than 145 in 57 times tables. We like 114, 2 times in 57 times table, so 2 goes above 5.

Subtract 114 from 145.

+

Bring down the 3 to make 313.

We don't like 313 in 57 times tables but we like 285, 5 times. So 5 goes about 3 as answer.

		0	0	2	5	
5	7	1	4	5	3	5
	-	1	1	4	↓	
		0	3	10 1	13	
		-	2	8	5	
			0	2	8	
		0	0	2	5	5
5	7	1	4	5	3	5
	-	1	1	4	↓	↓
		0	3	10 1	13	
		-	2	8	5	↓
			0	2	8	5

Subtract 285 from 313.

Bring the final 5 down to make 285. We like 57, 5 times in 57 times table so put final answer of 5 at the top.

Glossary

Array - a set of objects or numbers arranged in order, in columns when multiplying and dividing.

Calculation – A mathematical operation (not to be referred to as a sum).

Addition

Addition – increase, sum, total, plus, how many.

Subtraction – decrease, difference, reduce, subtract, minus.

Multiplication – product of, times, groups of, lots of, array.

Division - shared, divided, grouped, equal parts, parts of.

Equal – the same as. Two lines under a calculation.
